

**TO ACHIEVE TRUE SUSTAINABILITY**  
we need to balance economic, social and environmental factors in equal harmony.

We're passionate about improving the lives of our employees, their families and communities in which our restaurants operate. We're committed to serving seafood and fish products that are located from responsible fisheries.

By sourcing quality, sustainable products from credible, certified suppliers, we show that we care deeply about where our products come from and how communities and the environment are impacted. Sustainable seafood means it has been caught in a way that there's plenty more fish in the sea.

Choosing sustainable seafood recognises and rewards sustainable fishing practices, which in turn support livelihoods, communities, food security and healthy oceans teeming with life.
